

Use-Case Flow Specification - Record Match Score

Use Case: UC-02: Record Match Score

Primary Actor: Tournament Director

Preconditions

1. The tournament has been created and a valid match exists in the tournament bracket.
2. The Tournament Director is authorized to record match scores.
3. The selected match is available for score entry.

Main Success Scenario

1. The Tournament Director selects an ongoing match.
2. The system displays the match details and current score.
3. The Tournament Director enters the match score.
4. The system validates the entered score.
5. The system records the score for the selected match.
6. The system updates the match result.
7. The system updates the league standings.
8. The system displays a confirmation that the score and standings have been updated.

Postconditions

1. The match score is successfully stored in the system.
2. The match result is updated.
3. The league standings reflect the updated match result.

Alternate Flow — Invalid Score

1. At Step 4, the system detects that the entered score is invalid.
2. The system displays an error message.
3. The Tournament Director is prompted to enter a valid score.
4. The Tournament Director enters the corrected score.
5. The system validates and records the corrected score.
6. The use case continues from Step 6 of the Main Success Scenario.
